

Md Khayrul Islam

☎ +1 484 935 9363 | @ islam11@llnl.gov | 🔗 LinkedIn | 🐙 GitHub | 🎓 Scholar | 📁 Portfolio | 📍 CA, USA

EDUCATION

Lehigh University

Ph.D. in Mechanical Engineering; GPA: 3.84/4.00

- Awarded P.C. Rossin College of Engineering **fellowship**.

Pennsylvania, USA

Jan 2021 – May 2025

Lehigh University

M.S. in Mechanical Engineering (awarded en route to Ph.D.); GPA: 3.84/4.00

Pennsylvania, USA

Jan 2021 – May 2023

Thesis Title: Predicting Drug Loading in Extracellular Vesicles through Coarse-Grained Molecular Dynamics Simulation.
Published in **Phys. Chem. Chem. Phys.**

IBM

Professional Certificate in Data Science

Online

Aug 2024

- Built competencies in Python, machine learning, SQL, and data visualization, culminating in a capstone project.

SKILLS

Programming: Python , MATLAB , Bash , SQL 

ML & Computer Vision: PyTorch , torchvision , ONNX , OpenCV , ImageJ 

Simulation: COMSOL , EspressoMD , ANSYS , LAMMPS , GROMACS , VMD , SolidWorks 

Miscellaneous: Docker , Git , High-Performance Computing , Cloud Computing 

WORK AND RESEARCH EXPERIENCE

Lawrence Livermore National Laboratory

Postdoctoral Researcher – Machine Learning and Computer Vision

Livermore, CA

Sep 2025 – Present

- Sole developer of SNAP (Smart Neural Annotation Pipeline), an ML-guided image segmentation and annotation tool serving as the data backbone for NIF's (National Ignition Facility) transition to ML-based CV pipelines, supporting NNSA mission-critical capabilities at LLNL.
- Developing advanced ML and computer vision algorithms for identifying and tracking defects in NIF laser optics at the Computational Engineering Division.
- Conducting research on optical metrology analysis, automated decision-making frameworks, and predictive modeling to enhance optics performance and longevity, in collaboration with multidisciplinary teams of scientists and engineers.

University of Washington

Research Affiliate, Department of Electrical & Computer Engineering

Seattle, WA

Jul 2025 – Aug 2025

- Formalized a research collaboration on ML architecture development and hardware-aware optimization for biomedical image analysis.
- Contributed to FPGA-based acceleration strategies and system-level design for ultra-low-latency inference.

Lehigh University

Graduate Research Assistant

Bethlehem, PA

Jan 2021 - May 2025

- Collaborated in a multidisciplinary team to publish journal papers in computational biology and machine learning, featured in prestigious journals including Nature Communications, ACS, and RSC series, with 250+ citations.
- Supervised 4 undergraduate and 1 master's students; led 5 multidisciplinary group projects involving students from Bioengineering, Computer Science, and Mechanical Engineering.
- Administered a \$500K NSF-funded **high-performance computing (HPC) cluster**. Engineered initial setup and optimized on-demand resource allocation, achieving production-readiness for multidisciplinary research applications.

PROJECTS

UsTaxes Open-Source Contribution

Jan 2026 – Mar 2026

Refactored PDF processing pipeline to schema-driven named-field mapping, eliminating fragile positional indexing. Built automated schema extraction and JSON validation framework; integrated CI checks to enforce consistency and prevent breakage from external PDF changes; applied system to support Y2025 tax forms. **GitHub**

Sub-Millisecond Cell Sorting

May 2024 – Dec 2025

Led the development of a state-of-the-art FPGA-accelerated, label-free machine learning framework for real-time cell sorting, in collaboration with Fermi National Accelerator Laboratory and Northwestern University. Achieved sub-millisecond latency (14.5 μ s) and 98% classification accuracy by optimizing hardware-software co-design for high-precision biomedical applications.

Digital Discovery

Multiplex Image ML

May 2023 – Dec 2024

Led and first-authored a multimodal ML framework by architecting a novel pipeline fusing label-free imaging with biomechanical data. Achieved 98.3% accuracy via advanced denoising and segmentation. Published in **Microsystems & Nanoengineering**.

EV Drug Loading Optimization

May 2021 – Apr 2023

Developed a coarse-grained MD framework for simulating nanopore formation during extracellular vesicle squeezing to optimize drug loading, aligning with interface mechanics and transport phenomena. **Physical Chemistry Chemical Physics**
